Fundamentals of Geography

Edited by **Derek Gregory**

Five-Volume Set

Human geography is a diverse and vibrant subject. It aims to understand human occupancy of the earth's surface: the places created; boundaries constructed; environments altered; and connections made by people as they seek to meet their various needs and wants. Because of its high intellectual ambition, human geography is a broad and plural subject in which a wide range of research is undertaken. Making sense of the field can be challenging, even for seasoned practitioners. This four-volume collection provides a map for anyone seeking to reconnoitre the landscape of human geography today. Focusing mostly on Anglophone contributions, it begins with a discussion of the histories and philosophies of geographical knowledge and continues through to the central concerns of the discipline: space (in relation to productions, practices and performances); and nature (in relation to distinctions between 'culture' and 'nature').

ABOUT THE SERIES:

Fundamentals of Geography is a series of authoritative major works in human geography and physical geography edited by internationally recognized scholars. The first two in the series are overview volumes on these two main subject areas. Taken together, these two sets demonstrate what is singular about the geographical imagination and the unique contribution its diverse perspectives makes to human science and natural science, as well as the link it provides between the human and the natural.
